100' of Insulated 2 x 1" O2 Barrier PEX- Thermoflex

ThermoFlex pre-insulated PEX is used to transport hot and cold water without losing the temperatures to operate your hydronic system in the most intensive environments. You can use both oxygen barrier PEX or non-oxygen barrier PEX depending on your boiler configuration. Open boiler systems may use both types of PEX while closed loop systems is recommended to use oxygen barrier ThermoFlex to prevent oxygen getting into the systems . Our insulated PEX comes with a 2 pipe system for supply and return. The PEX pipes are insulated with almost 5" of high quality closed cell polyethylene foam which provides thermal performance and protection against water migration. The nonporous outer shell is made of virgin plastic to protect the inner insulation and PEX pipes. There is about 1/4" of air space between the outer shell and the insulation to help trap air for better insulation properties. The loss is about 1.2% on 100' of insulated PEX. Configurations: You have a choice between 1" or 1 1/4" PEX pipe for supply and return. We can offer common coil sizes or custom coil sizes in increments of 10'. If you do not see your configuration, please give us a call for any custom pre-insulated PEX such as coil lengths, PEX sizes, and electrical wire insertion. Fitting Compatibility: Since this pipe is made in accordance to ASTM F 876/877, the dimensions
